

● DIGITAL ENGINEERING STUDIO

SYSTEMS & EXPERIENCES

We engineer high-performance web systems, custom database tools, workflow automations, and Awwwards-grade digital interfaces designed to drive measurable business returns.

01 // THE STATEMENT

WE REFUSE TO BUILD ORDINARY DIGITAL EXPERIENCES.

Our obsession with engineering detail, latency optimization, and custom interactive flows transforms ambitious brands into industry icons. We believe code should be an asset, not an overhead.

02 // WHAT WE DELIVER

WEBSITES & WEBAPPS

Custom frontend engineering using Next.js and Vite. Tailored layouts, animations, and responsive elements.

**WORKFLOW
AUTOMATION**

Automating manual steps via webhooks, cloud triggers, data syncs, and database optimizations.

**REDESIGN &
REDEVELOPMENT**

Upgrading legacy, boxy systems to highly modern, light-speed, conversion-focused responsive layouts.

INTERNAL TOOLS (CRM / HRM)

Bespoke management consoles, user dashboards, and role-based portals configured for exact business operations.

AI INTEGRATIONS

Integrating LLMs, custom agents, and vector databases directly into your current websites or softwares.

SEO & ONLINE PRESENCE

Structuring pages for perfect indexability, high Lighthouse speeds, and digital marketing setups.

03 // DETAILED CAPABILITIES BRIEF

SYSTEMS CAPABILITIES MATRIX

FE

FRONTEND
ENGINEERING

We build state-of-the-art interactive frontends utilizing React, Next.js, and Vite. We write responsive layouts that reflow perfectly on mobile. By leveraging Framer Motion and GSAP, we integrate rich micro-interactions and GPU-accelerated motion layers that load instantaneously.

BE

BACKEND &
ARCHITECTURE

Our backends are designed for high throughput, scalability, and security. We build RESTful and GraphQL APIs using Node.js, Java, and Python. We structure robust databases (PostgreSQL, MongoDB) and ensure strict data safety with secure authentication layers, role-based controls, and transaction-safe ledgers.

CL

CLOUD &
AUTOMATION

We automate repetitive processes, sync platforms, and deploy on modern serverless edge systems (Vercel, AWS). We dockerize applications and use CDNs to guarantee zero-downtime hosting, Edge caching, and sub-100ms global latencies to maximize business agility.

04 // PROCESS PIPELINE

HOW WE BUILD

01**DISCOVERY & STRATEGY**

We map your goals, define constraints, draft scopes of work, and outline architecture dependencies before writing code.

02**DESIGN & PROTOTYPING**

We draft bespoke layouts, design visual systems, and map responsive wireframes, focusing on brand identity.

03**PRECISION ENGINEERING**

We code the system with modular blocks, connecting backend metric layers, APIs, and secure database tables.

04**LAUNCH & SCALE**

We deploy with zero downtime to CDN edges, run security audits, compile assets, and launch speed analytics monitoring.

05 // THE COLLECTIVE

WHO WE ARE

We are a tight-knit collective of senior software engineers, full-stack developers, and database architects. By combining enterprise-grade technology expertise with agile freelance execution speeds, we deliver state-of-the-art results without agency bloat.

Lead Software Dev	Akshar
Software Engineer	Abhinav
FullStack Developer	Adnaan
Java FullStack Developer	Bhuvan

06 // IMPACT STUDY

ZOVIQ WEB OVERHAUL

We overhauled Zoviq's legacy, boxy web presence into a high-fidelity interactive showroom for their AI agents. By integrating advanced motion layers, standardizing responsive components, and optimizing caching routines, we drove real business returns:

07 // PRICING MATRIX

ONE-TIME INVESTMENT, LIFELONG RETURN

Math Check: Why pay recurring payroll or SaaS subscription traps forever? Invest **1 month of a single staff member's salary** into a permanent digital asset that works 24/7/365, never takes sick leave, and drives returns forever.

PHASE_01 // ENTRY STAFF SALARY

BASIC LANDING PAGES

Equivalent to 1 month's salary of low-level staff. High-converting, responsive single-page portals designed for lead capture.

₹20,000 - ₹30,000

25k

PHASE_02 // MID-LEVEL SALARY

FULL CUSTOM WEBSITES

Equivalent to 1 month's salary of mid-level staff. Bespoke, multi-page business frameworks with custom database CMS and motion layers.

₹45,000 - ₹60,000

50k

PHASE_03 // SENIOR STAFF SALARY

INTERNAL SOFTWARE & CRMS

Equivalent to 1 month's salary of senior/management staff. Custom workflow systems (CRM, HRM) to automate operational overhead.

Custom

UNMATCHED SUPPORT SERVICE LEVEL AGREEMENT

Every project we ship includes 3 Years of Free Maintenance (dependency upgrades, security auditing, edge hosting, and minor tweaks).

3_YEARS_SLA // INCLUDED
